Comm Control

A spoken report becomes a response plan.

Mihir Duvedi Tyler Tran Shen Tan

October 2026

Every report leaves the desk with decisions to make

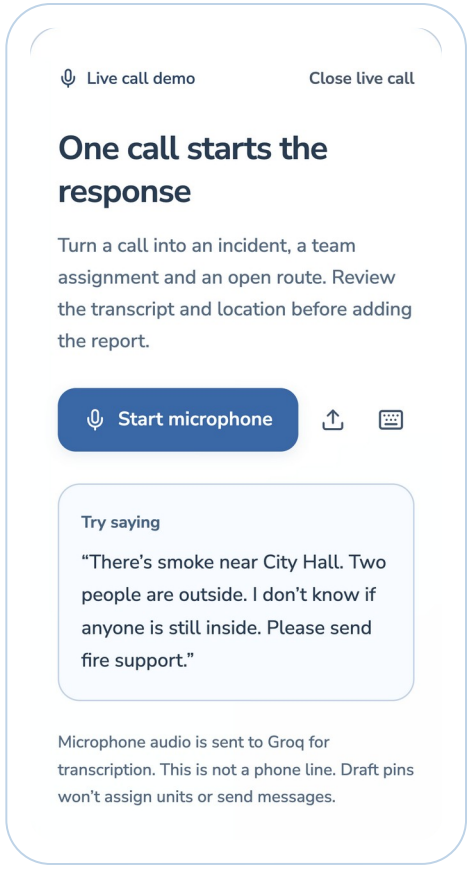

“There’s smoke near City Hall.
Two people are outside.
I don’t know if anyone
is still inside.”

Where is the event?

Who can respond?

Which path is open?

The report keeps its source

Speak

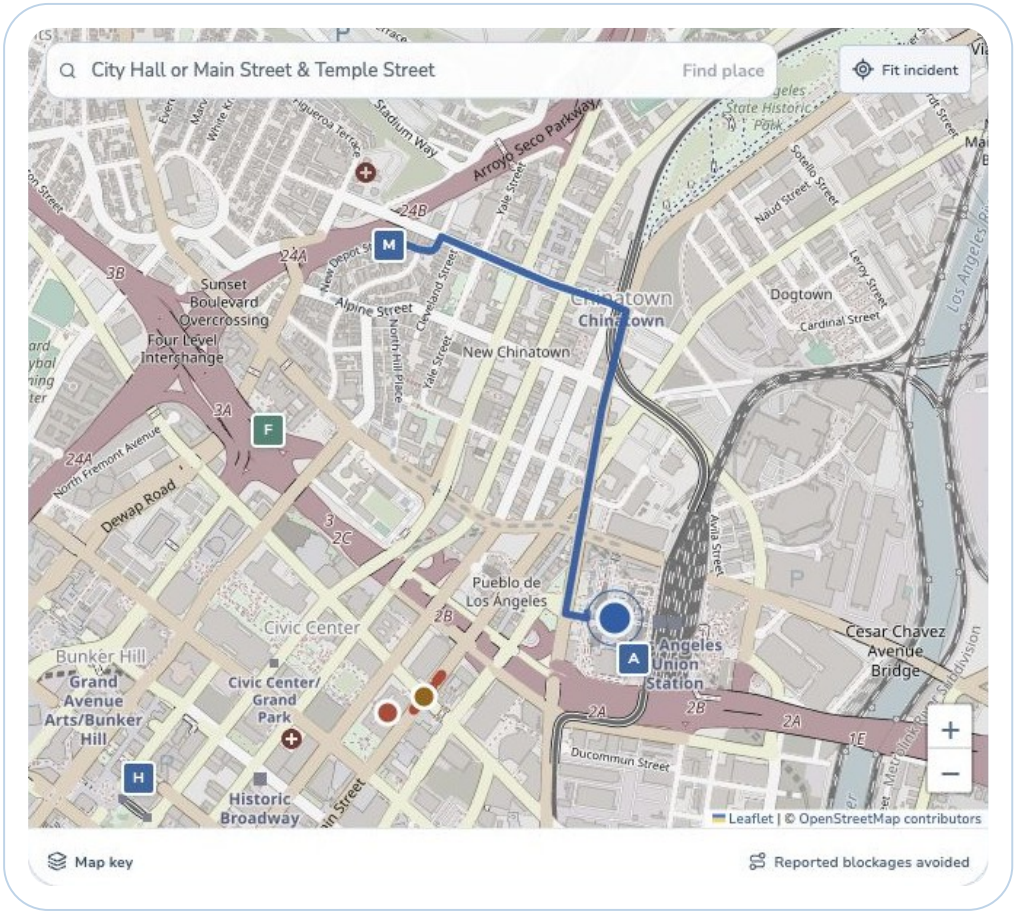

Record the report in the browser.

Review

Check the facts against the report.

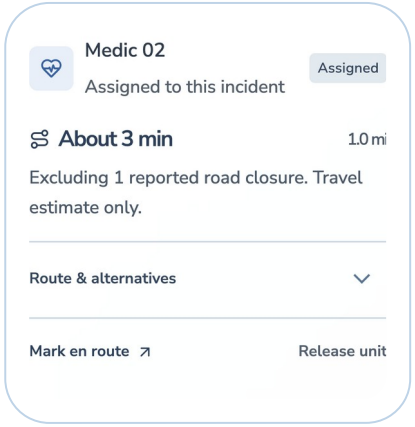

A team and a way there

Union Station

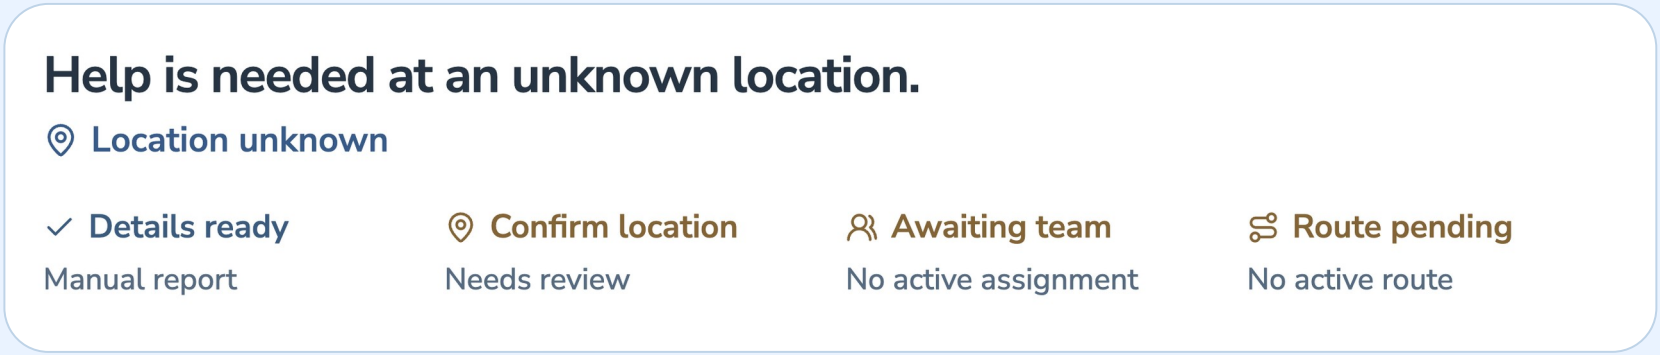

A suitable available unit.
A route around the reported blockage.

Map data © OpenStreetMap contributors.

If the location is missing, the route waits.

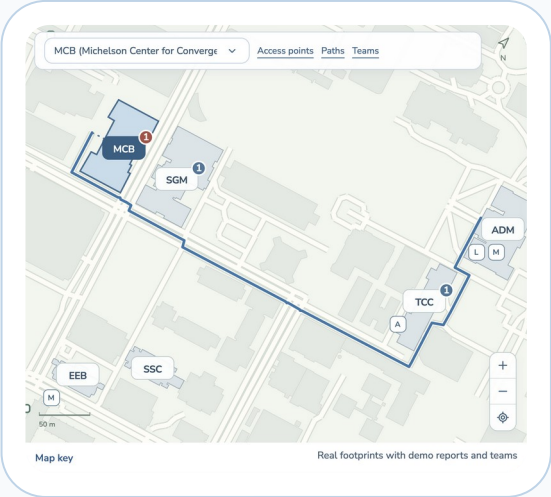

Uncertainty stays in the case until someone resolves it.

Everyday operations and emergency response

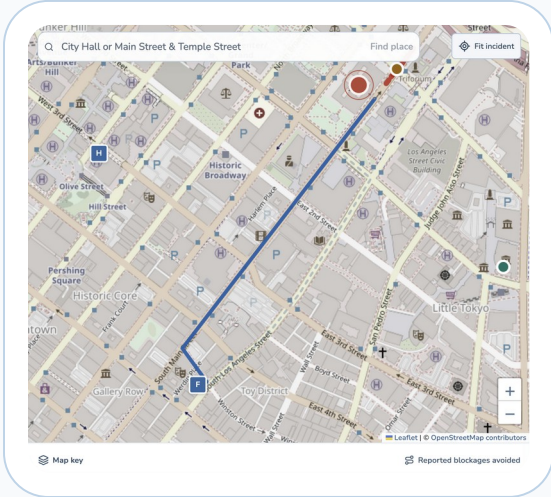

Everyday facilities

Campuses, warehouses and buildings

Emergency responders

Incident surge coordination

Map data © OpenStreetMap contributors.

The workflow runs end to end

Voice and extraction	Hosted Groq models. Internet required.
Review and incident records	React, FastAPI and SQLite.
Allocation and routing	Capability, availability and reported closures.
Delivery model	Compact packets, retries and receipts in simulation.

241 backend tests passed

45 distinct browser checks passed

One site first. Then more regions.

First pilot

An LA facilities team first. Then a Spanish-language warehouse pilot in Mexico City.

Expansion roadmap

Language support

Regional maps

Local response procedures

Site setup and a software subscription

Site setup	**$2,000** Map, terminology and workflow configuration
Subscription	**$500 per site / month**

Federal funding route: DHS S&T SBIR Phase I

We’d love to test this with a real facilities team

Help us learn what makes the desk’s job easier and where Comm Control needs to improve.
